

Botulinum Toxin Type A & B

CPT Code: **J0585** – BOTULINUM TOXIN TYPE A, PER UNIT
 J0587 – BOTULINUM TOXIN TYPE B, PER 100 UNITS

Indications for use: Botulinum toxin injections are used to treat various focal muscle spastic disorders and excessive muscle contractions such as dystonias, spasms, twitches, etc. These drugs produce a presynaptic neuromuscular blockade by preventing the release of acetylcholine from the nerve endings. The resulting chemical denervation of muscle produces local paresis or paralysis and allows individual muscles to be weakened selectively. Botulinum toxins have the advantage of being potent neuromuscular blocking agents with good selectivity and duration of action.
